1.0 Introduction

The title of our project is “the Learning Mode and Its Influence in students’ Academic Performance”. Our goals are to delve into students’ study habits and their involvement in curriculum that will affect their academic outcomes. It is fascinating to note that every student has a unique approach in studying. They have their own study mode and learning style shaped by their individual preferences. Some of them incorporating elements of fun and play into their study sessions helps ward off boredom and keeps them engaged but there are also some who prefer firmly focusing on studying, immersing themselves fully in the material at hand. Do I say it correctly? Based on our preliminary research, it seems we're on the right track.

For our project, we plan to survey undergraduate students from various universities, such as the University of Malaya (UM), Nanyang Technological University (NTU), Universiti Putra Malaysia (UPM), and other institutions as we aim to gather insights from students across different universities. However, a significant portion of our respondents will be from Universiti Teknologi Malaysia (UTM). The rationale behind this decision is to ensure consistency and comparability in the data collected, particularly regarding academic performance levels and grading systems. This approach allows us to capture a comprehensive view of the factors influencing students' academic performance while maintaining a degree of consistency in our research methodology.

The questionnaire we prepared are in Google Form and is distributed to all through media such as Telegram, WhatsApp and Instagram. We successfully gathered 69 responses which are more than enough for our analysis. The expectation we have for this research is that students currently prefer to study right before the exams and students do feel free to participate in activities they are interested in. All of the students should have their own learning style instead of modelling someone. We should believe that belief that effective learning is not confined to a singular approach but rather encompasses a spectrum of methods tailored to individual preferences and strengths. Each student has his own unique learning style, emphasizing the importance of authenticity and self-discovery in the pursuit of academic excellence.

2.0 Data Collection

The methodology that we used in this project to collect data is through conducting a survey via Google Form. The survey consists of some parts, which are the personal information of the respondent, the study habits and curriculum details, Their opinion on learning mode generally and their learning outcomes. Here are the questions and details.

No	Question	Answer	Level of Measurement
1	Age	• Short answer	Ratio
2	Gender	• Male • Female	Nominal
3	Current year	• Year 1 • Year 2 • Year 3 • Year 4	Ordinal
4	Number of courses taken this semester	• Short answer	Ratio
5	Do you study regularly or seldom?	• Regularly • Seldom	Nominal
6	How long do you usually spend for studying in a day?	• Short answer	Interval
7	Do you prefer doing revision every week or right before the exams?	• Every week • Right before exams	Nominal
8	What time do you normally sleep?	• Time in 12H form	Interval
9	What time do you typically find yourself most productive when learning?	• Time in 12H form	Interval
10	Do you participate in any activities?	• Yes • No	Nominal

11	How many activities / sports / clubs have you taken part in?	• 0 • 1 • 2 • 3 • More than 3	Ratio
12	On average, how much time do you spend to participating in these activities each day?	• Short answer text	Ratio
13	Do you believe that participating in extracurricular activities or clubs will positively influence your studies?	• 1 (Strongly agree) - 5 (Strongly disagree)	Ordinal
14	Do you agree that pass year questions / papers can help a lot of preparations for the exams?	• 1 (Strongly agree) - 5 (Strongly disagree)	Ordinal
15	If yes, estimate how long before the exams you will start practicing on the questions.	• I don't do pass year ques • One week before exam • 5 days before exam • 3 days before exam	Nominal
16	What is your CGPA?	• 3.70 and above • 2.70-3.69 • 1.70-2.69 • Below 1.70	Interval
17	Are you comfortable with your learning mode right now?	• 1(nope) - 5(sure)	Ordinal
18	Would you consider changing your current learning mode?	• Yes • No	Nominal

3.0 Data Analysis

3.1 Respondents' Biography

3.1.1 Respondent's Age

Age	Frequency
19	9
20	50
21	5
22	2
23	2
24	1
Total	69

Table 3.1.1.1 Frequency Distribution of Age of Respondent

Figure 3.1.1 Bar Chart of Age of Respondent

Measure of Central Tendency	Value
Mean	11.5
Median	20
Mode	20

Table 3.1.1.2 Measure of Central Tendency of Age of Respondents

As seen in Table 3.1.1.1 and Figure 3.1.1.1, the age distribution of respondents that have answered our questionnaire are around the range of age 19 to 24. Since this research is focused on undergraduates of UTM, most of the respondents are of age 20, with the frequency of 50. Students of age 21 come close with the frequency of 5, and there are 9 19-year-old respondents. The rest are respondents of age 22-year-old and 23-year that only has 2 students. Finally, age of 24, hold a frequency of 1 student. Additionally, it can be seen from Table 3.1.1.2 that the data we gathered will mostly be from respondents of age 20, as our median and mode both are 20, and mean being 11.5.

3.1.2 Respondent's Gender

Gender	Frequency	Percentage
Male	44	63.8%
Female	25	36.2%
Total	69	100%

Table 3.1.2.1 Frequency & Percentage of Gender of Respondent

Figure 3.1.2.1 Pie Chart of Gender of Respondent

As indicated in Table 3.1.2.1 and Figure 3.1.2.1, which are the frequency table and pie chart of respondent gender, the frequency of male is 44 and the frequency of female is 25. As a result, most of our respondents are males which consists of 63.8% and female respondents only consists of 36.2%. There are 69 respondents of each gender. In addition, the pie chart of responder gender illustrates that red means male and blue means female.

3.1.3 Respondent's Current Academic Year

Academic Year	Frequency
Year 1	60
Year 2	6
Year 3	2
Year 4	1
Total	69

Table 3.1.3.1 Table of Respondent's Current Academic Year

Figure 3.1.3.1 Bar Chart of Respondent's Current Academic Year

As stated in Table 3.1.3.1 and Figure 3.1.3.1, all of our respondents come from different academic years. The academic year with the most respondents are Year 1 students which have 60 respondents. Following that, it will be Year 2 students which only have 6 respondents. Finally, only 2 Year 3 students and 1 Year 4 student was recorded in the data, with Year 4 being the lowest among all other academic year. In conclusion, we can finalize that 60 out of a total 69 respondents are Year 1 students as well as the mode of the academic year.

3.2 Students' Study Habits and Curriculum Details

3.2.1 Number of Courses Taken This Semester

Number of Courses Taken	Frequency
5	12
6	50
7	6
8	1
Total	69

Table 3.2.1.1 Table of Number of Courses taken by Respondents

Figure 3.2.1.1 Bar Chart of Number of Courses taken by Respondents

Table 3.2.1.1 and Figure 3.2.1.1 depicts each respondent has taken a different number of courses due to having different major courses and academic year. 12 respondents have taken 5 courses, 6 respondents have taken 7 courses and 1 have taken 8 courses. Mainly, 50 respondents have taken 6 courses which is the most common or outstanding data. This may indicate that most of the respondent might come from a same faculty or academic year.

3.2.2 Do you study regularly or seldom?

Occurences of Respondent Studying	Frequency
Seldom	52
Regularly	17

Table 3.2.2.1 Table of Occurences of Respondent Studying

Occurences of Respondent Studying

Figure 3.2.2.1 Pie Chart of Occurences of Respondent Studying

From Table 3.2.2.1 and Figure 3.2.2.1, it is shown that most respondents study seldomly with the percentage of 63.8% or 52 out of 69 respondents. It demonstrates that the respondents may be prone to lack of time management or motivation. While the rest of the 17 respondents or 36.2% are respondents study regularly. This might signify not the majority of the respondent have a study system or good time management.

3.2.3 How long do you usually spend for studying in a day? (Hour)

Hour	Frequency
0	2
0.5	3
1	11
1.5	1
2	26
3	5
4	8
5	5
6	3
7	1
8	3
24	1
Total	69

Table 3.2.3.1 Table of Time Spend for Studying in a Day

Hours spend for studying

Figure 3.2.3.1 Box Plot of Hours Spend for Studying

As observed in Table 3.2.3.1 and Figure 3.2.3.1, the data illustrates the range of time students allocate to studying, spanning from 0 to 24 hours, with the majority dedicating their time between 1.75 and 4 hours. However, the presence of outliers who report studying for 24 hours implies that some respondents may have days without classes. Further exploration into the factors contributing to these extremes is warranted. One hypothesis posits that many respondents do not invest significant time in studying during their leisure hours.

3.2.4 Do respondents prefer doing revision every week or right before the exams?

Preferred revision method	Frequency
Every week	27
Right before exams	42
Total	69

Table 3.2.4.1 Frequency Distribution of preferred revision method by respondent

The preferred method of revision for students.

Figure 3.2.4.1: Pie Chart of preferred method of revision for students

From table 3.2.4.1 and figure 3.2.4.1 show that the preferred method of revision for student. It demonstrates that many respondents, about 42 out of 69 respondents like to revision before exams. The percentage of respondents who preferred revision before exam is 60.87%, whereas the percentage of respondents who do revision every week is 39.13%, or around 27 out of 69 respondents. It is clear that students nowadays are more inclined to review before exams. Furthermore, the pie chart shows that the colour red is considered "Revision every week" while the colour blue is considered "Revision right before exam".

3.2.5 What time do student usually to sleep

The decimal point is at the |

```

0 | 00000000000000000005
1 | 00000000555

```

Key 0 | 5 = 00:30

Figure 3.2.5.1: Stem & leaf plot of students' usually sleep time

Figure 3.2.5.1: Dot Chart of students' usually sleep time

According to Figure 3.2.5.1, the dot plot describes students' time to sleep. Our initial expectation for this chart was that most points were closer to 10pm, but surprisingly, most reactions were closer to around 12am to 1am. This may be because of the effects of being involved in too many extracurricular activities, as it is a fun but time-consuming thing to do. Students may miss their studies by participating in too many fun activities. So, they need to catch up after activities, most likely in the evening. That's why most points are close to 12 a.m. It can be concluded that participating in extracurricular activities may influence college students to go to bed slightly later than usual.

3.2.6 What is the most productive time for learning

The decimal point is at the |

0		0000
1		0000
2		001
3		
4		0
5		005

21		0000000000
22		00
23		0

Key 5 | 5 = 05:30

Figure 3.2.6.1: Stem & leaf plot of most productive time for learning

Figure 3.2.6.1: Bar Chart of most productive time for learning

According to Figure 3.2.5.1, the bar chart describes students' time to sleep. The chart above shows the time when students feel they are most productive. Among them, 9pm to 10pm is the prime time for most students to study. We believe that there are several factors contributing to this result. First, it may be because the noon period is the time when students have just finished class, and their energy has been largely consumed, which is not suitable for further study. The second is in the afternoon to evening, when students have to participate in extracurricular activities, so there is no time. The rest of the day falls into the evening, and lead to this result.

3.2.7 Do student participate any activities

Answer	Frequency
Yes	51
No	18
<i>Total</i>	69

Table 3.2.7.1 Frequency Distribution of preferred revision method by respondent

Does student participate any activities

Figure 3.2.7.1: Pie Chart of student participation in activities

From table 3.2.7.1 and figure 3.2.7.1 show that the participation of student in activity. According to the data, 51 students participated in extra-curricular activities, accounting for about 73.91%, whereas the percentage of respondents who do not join any activity is 26.09%, or around 18 out of 69 respondents. It is clear that most students are involved in extra-curricular activities. There are a variety of clubs and activities in the university, which will be one of the key factors in shaping the results shown in the figure.

3.2.8 How many activities does student join

Number of activities	Frequency
0	18
1	21
2	15
3	4
More Than 3	11
<i>Total</i>	69

Table 3.2.8.1 Frequency Distribution of number of activities does student join

Figure 3.2.8.1: Bar Chart of number of activities does student join

Table 3.2.8.1 and Figure 3.2.8.1 showed that from the students surveyed, the majority (51 out of 69) participated in extracurricular activities, with 21 participating in one activity and 15 in two. Four students participated in three activities and 11 students showed high engagement, participating in more than three activities. This indicates that the overall trend of student engagement is positive, with a proportion of people highly engaged. Further exploration of the reasons behind different levels of participation and their potential impact on student achievement could provide valuable insights into improving student engagement and the overall educational experience.

3.2.9 Average time of student spend in extracurricular activities (daily)

Number of hour participating activities	Frequency (daily)
0	12
0.25	1
1	12
2	23
3	9
4	2
5	3
6	3
7	0
8	1
9	1
10	0
11	0
12	2
<i>Total</i>	69

Table 3.2.8.1 Frequency Distribution of average time student spend in activities (Hour)

Figure 3.2.9.1: Box plot of average time student spend in activities

Figure 3.2.9.2: Scatterplot of number of activities student participated and the daily time time spent in those activities

Table 3.2.9.1 and Figure 3.2.9.1 showed the amount of time students spend on extracurricular activities ranges from 0 to 12 hours, with most spending between 1 and 6 hours. Peaks at 2 and 3 hours indicate a general level of participation in this range. However, outliers at 0.25 hours, 8 hours, 9 hours, and 12 hours indicate unusually low or unusually high levels of participation, and further investigation of the factors leading to these extremes is needed. We hypothesized that the low participation factor may be due to heavy schoolwork, while the unusually high participation factor may be due to the possibility of appearing in a show or not practicing for a long time. Besides, Figure 3.2.9.1 showed the relationship between number of activities participated with the time spent on the activities. We can easily observe that the relationship between number of activities and time spent on activities is directly proportional.

3.3 Respondent's Opinion on Learning Mode (General)

3.3.1 Do you believe that participating in extracurricular activities or clubs will positively influence your studies?

Answer	Frequency
Strongly Agree (5)	11
Agree (4)	24
Neutral (3)	26
Disagree (2)	4
Strongly Disagree (1)	4
TOTAL	69

Table 3.3.1.1: Frequency table of whether participating clubs will positively influence studies

Figure 3.3.1.1: Bar Chart of whether participating clubs will positively influence studies

From table 3.3.1.1 and figure 3.3.1.1 shows that UTM students' opinions on whether extracurricular in positively influencing them. 11 respondents strongly agree, 24 respondents agree, 26 respondents are neutral and only 4 respondents disagree and strongly disagree respectively. From the bar chart, most of the respondents agree that clubs will positively impact their studies as extracurricular activities can helps university students to release stress. However, over participating in clubs' activities will also lead to unbalanced of studies and activities. Therefore, we should involve in the number of activities in our capability.

3.3.2 Do you agree that past year questions / papers can help a lot in preparations for the exams?

Answer	Frequency
Strongly Agree (5)	42
Agree (4)	19
Neutral (3)	6
Disagree (2)	1
Strongly Disagree (1)	1
TOTAL	69

Table 3.3.2.1: Frequency table of whether past year question will help a lot in exam

Figure 3.3.2.1: Bar chart of whether past year question will help a lot in exam

According to the data from Table 3.3.2.1 and Figure 3.3.2.1, 42 out of 69 respondents strongly agree that past year question helps a lot in examination. 19 respondents agree while 6 respondents are neutral about it. Otherwise, only 1 respondent disagree and strongly disagree that past year question helps in examination. Through this data, we can analyse that most of the student in UTM do past year question for their preparation for the examination to maintain their academic performances.

3.3.3 How long before the exams you will start practicing on the questions?

Answer	Frequency
One week before exam	47
5 days before exam	8
3 days before exam	12
I don't do past year question	2
TOTAL	69

Table 3.3.3.1: Frequency table of time of practicing on past year question

Table 3.3.3.1: Pie chart of time of practicing on past year question

It is about the time taken for respondents to start practicing on question before examination and as shown in Table 3.3.3.1 and Figure 3.3.3.1, approximately 47 out of 69 respondents practicing question one week before exam while 8 respondents practicing 5 days before exam. Furthermore, there are 12 out of 69 respondents practicing 3 days before exam and only 2 respondents which don't do any question before examination. This shows that most of the done more early before the exam to achieve a good academic performance at the end of the semester but there are also some of respondents use only 3 or 5 days to done their practicing on the examination.

3.4 Respondent's result with their own learning mode

3.4.1 What is your CGPA?

Answer	Frequency
3.70 and above	54
2.70 to 3.69	15
1.70 to 2.69	0
Below 1.70	0
TOTAL	69

Table 3.4.1.1: Frequency table of time of practicing on past year question

Figure 3.4.1.1: Pie chart of time of practicing on past year question

Based on the data from Table 3.3.4.1 and Figure 3.3.4.1, we can conclude that 54 out of 69 respondents are having CGPA 3.70 and above while 15 respondents are having CGPA from range 2.70 to 3.69. However, there are 0 respondent that having CGPA of range 1.70 to 2.69 and no respondent having CGPA below 1.70. From this data, we can conclude that most of the student in UTM have their suitable revision style and good time management as they can participate in club without affecting their academic performance. However, there are also some students are lack in those technique as their academic performance is in moderate level. In conclusion, student must have good time planning as they able to perform good in examination while participating in activities.

3.4.2 Are you comfortable with your learning mode right now?

Answer	Frequency
Strongly Agree (5)	13
Agree (4)	23
Neutral (3)	22
Disagree (2)	9
Strongly Disagree (1)	2
TOTAL	69

Table 3.4.2.1: Frequency table of whether comfortable with current learning mode

Figure 3.4.2.1: Bar chart of whether comfortable with current learning mode

In the Table 3.4.2.1 and Figure 3.4.2.1 shown that 13 respondents strongly agree about their comfortable with their current learning mode while 23 out of 69 respondents agree about their comfortable with their current learning mode. Moreover, there are 22 respondents who are neutral about this. Furthermore, 9 out of 69 respondents disagree about their comfortable with their learning mode while only 2 respondents are strongly disagreeing about it. From here, we know that most of the respondents are comfortable with their learning mode, and some are neutral. However, there are few of respondents feels uncomfortable with their learning mode which will affect their academic result at the end of the semester. In conclusion, we must find out the most suitable learning mode to get better result.

3.4.3 Would you consider changing your current learning mode?

Answer	Frequency
Yes	28
No	41
TOTAL	69

Table 3.4.3.1: Frequency table of whether consider changing current learning mode

Would you consider changing your current learning mode?

Table 3.4.3.1: Pie chart of whether consider changing current learning mode

Referring to the pie chart above, there are only two choices which is “Yes” or “No”. Most of the respondents which is 41 out of 69 respondents have choose the option “No” as they are comfortable with their study mode and want to remain it. However, there are 28 out of 69 respondents consider changing their current learning mode. This is because their current learning mode are not suitable for them and not getting a better result at the end of semester. In conclusion, we must change our learning mode immediately when we found out the current learning mode is not suitable for us.

4.0 Conclusion

Our research has concluded with 69 respondents from the degree students from different universities but mainly in UTM students. It consists of 44 males and 25 females. The mode among our respondents lies at the age of 20 which are mainly the Year 1 students. It takes frequency of 60 out of 69 students who respond to our google form. The survey we prepared asks the respondent about their learning mode and its influence in Academic Performances. For instance, question like how long they usually spend studying in a day, prefer doing revision every day or right before the exam, and do they think participating in extracurricular would influence their studies, etc. These questions allow us to make deductions and generalization on students' study habits and the influence of it.

Based on our findings, 42 out of 69 students prefer studying right before the exams, and we have collected 52 out of 69 students seldom do their revision. However, this result is what we expected at the beginning. Nowadays, students' life is not just on academics, they have their own interests and responsibilities in other activities. The traditional method has gradually evolved into a more nuanced approach, where students prioritize balance and flexibility in their schedules. The preference for studying closer to exam dates can be attributed to various factors, including the desire for efficiency and the need to manage competing priorities effectively. Next, from the stem and leaf plot, we could see that students normally sleep at around 12am to 1am

In our next finding, 73.91% of our respondents participate in extra-curricular activities based on our pie chart, figure 3.2.7.1. Most of them do participate in extra events and from our bar chart, figure 3.2.8.1, the mode for the number of activities is one. However, there are also students who participate in more than one activity. The average time of students spend in extracurricular activities peaks at 2 to 3 hours and some who spend their time more than 3 hours too based on our table 3.2.8.1. In short, do you agree that spending too much time or participating in extracurricular would affect our academic result at the end? Based on our research, yes. 26 out of 69 students responded neutral and 24 out of 69 students agree with our statement based on our bar chart 3.3.1.1. For proof, based on our dot chart, figure 3.2.5.1, students usually sleep around 12am to 1am. One of the reasons might be involving in too many extra-activities and they need to catch up after their activities ended. On the next bar chart, figure 3.2.6.1, students also prefer to study at around 9pm to 10pm. The main reason we could conclude students to study at night is as follow: They could barely find the time to do revision at the afternoon as their energy has been large consumed and tired for further

study. Furthermore, students might have other extra-curricular activities so there is no time for them.

To sum up, we would like to emphasise on the vast amount of knowledge we gained after conducting this survey. In the early phase of data collecting, we learn to create Google Forms efficiently to make our questionnaire to our target population with ease. We learnt to utilized different types of data measurements including nominal, ordinal, interval and ratio scales to analyse the responses in daily life. Next, the most crucial part in our project is how to create statistical charts using R programming. The bar charts, dot plots, pie chart and etc are all formed using the R programming. Other than, doing charts, it also can use to make calculations such as the mean, mode, quartiles, etc for our data analysis. R programming really helps us a lot to make us easier to do data collection and interpreting the data.

In conclusion, we have successfully done our survey and this study provides us to have a hands-on practising in all aspects starting in collecting data to analysing all the data we got. we would like to thank our lecturer Dr. Nur Haizan binti Mohamed Radzi for guiding us on our project and our 69 respondents for their participation in helping us to complete our research.
